

# Connect Your School Technology

School technology is at its best when the solutions you use work together. When you don't have to manage dozens of logins to get the same information. When the technology itself is backed by friendly, experienced people.

From a sophisticated student information system connected to your financial system of record, to professional development and teacher/leader coaching, we can help you improve nearly every aspect of your school community. We'll give you access to a fully-connected data infrastructure, and help you build a FACTS ecosystem that works for your school's specific needs.

And throughout our partnership, we'll be right by your side with insights, encouragement, and help whenever you need it.
